Work Experience

Software Engineer at *Joist* in Toronto

August 2018 to Present

- Developed MVP for a new in-house payments platform
- Led migration of legacy Ember client to React using component driven development
- Deliver value to contractors through the development of end to end features on the web platform
- Implement optimizations to improve application response time and overall performance
- Provide feedback on a number of actionable platform improvements
- Launch engineering initiatives to promote innovation and reduce technical debt
- Responsible for the grooming, planning and development of two new SaaS packages

Fullstack Web Developer at *Inbox Marketer* in Guelph

June 2017 to July 2018

- Developed multiple proof of concept applications including a minimum viable product rebuild of an existing project slated for an end of year release
- Set up a number of clustered and development environments using Google Cloud Platform, Kubernetes and Docker
- Created several TDD environments for various front-end and back-end projects
- Led technical training sessions as well as onboarding several new employees, including co-ops
